

5g base station new wind power supply design solution

Overview

What is 5G power supply?

The development of 5G networks brings new challenges for powering base stations. MPS has developed a powerful new power supply solution for 5G telecom applications that ensures stable and efficient power delivery, accurate current sensing, and highly efficient power factor correction to maintain a stable output voltage amid large load variations.

Which MP's products are best for 5G?

Several innovative, high-performance MPS products, including the MPF32010, MCS180x family, MP18831, MPF32020, MP023 and MPQ27800 New 5G networks bring new challenges for powering base stations. MPS has developed a powerful, efficient new power supply solution for 5G telecom applications using several innovative products.

What is a small cell in 5G?

Small cells are a new part of the 5G platform that increase network capacity and speed, while also having a lower deployment cost than macrocells. The compact size of a small cell requires that all components – especially power converters – provide high efficiency, better thermals and eventually the best power density possible.

How do small cells fit into the 5G ecosystem?

A cell tower (also called a macrocell) is a huge umbrella used to provide radio signals to thousands of users in large areas with minimal obstructions. To extend the coverage of a macrocell, distributive antenna systems (DASs) are used in conjunction with the cell tower.
