

60kWh Off-Grid Solar Container for Wastewater Treatment Plants

Overview

Can solar energy be used in wastewater treatment?

The work within SHC Task 62 shows solar energy's great potential in wastewater treatment. Nevertheless, there is still the need to take further action. Using separation technologies such as membrane distillation in combination with solar process heat represents an innovative leap in the industry.

Can solar-driven water treatment be used in rural areas?

The technical and economic potential assessment for using solar-driven water treatment sets the course for further research and development projects in the most significant industrial sectors and municipal wastewater treatment, but also for use in rural areas (e.g., Africa) for applications like drinking water production.

Are solar photons a viable solution for wastewater treatment?

In addition to thermal technologies, decontamination, and disinfection processes are paramount in wastewater treatment. Developing new decontamination and disinfection systems using solar photons must gain significant attention and visibility as a promising solution for achieving effective and sustainable disinfection.

How much electricity can a wastewater treatment plant generate?

A coefficient of 0.184 is obtained and it means that the space for handling 1 m³ /d of wastewater can lead to 18.4 kWh/a of electricity generation under the current deployment paradigm in China. Generally, 0.33 kWh/d is required to treat 1 m³ volume of wastewater at WWTPs in China, thereby leading to about 120 kWh annually.
