

# Australia Energy Storage Project

## Overview

---

What is the largest battery energy storage project in Australia?

The battery energy storage system project is currently the largest battery energy storage project in Australia under construction. It is planned at Powell Creek to stabilise and store electricity generated from a six-gigawatt solar farm in the Barkly region.

What is EnergyAustralia's energy storage project?

The energy storage project will provide EnergyAustralia with a natural hedge against such market fluctuations and help stabilise energy prices and ensure a more resilient energy supply. "At EnergyAustralia, our purpose is to lead and accelerate the clean energy transformation for all," said EnergyAustralia Managing Director, Mark Collette.

What is Australia's energy infrastructure project?

This pivotal project is set to enhance Australia's infrastructure by providing essential grid stability and supporting the integration of renewable energy, aligning with the country's ambitious decarbonisation goals. The scope of the contract includes engineering design, supply, commissioning, and a 15-year service agreement.

Will Australia's upcoming battery projects reduce fossil fuel dependency?

Australia's upcoming battery projects signal a major shift in the national energy landscape reducing the dependency on fossil fuel. Several government schemes like the Capacity Investment Scheme (CIS) aims to deliver the Australian Government's 82% renewable electricity by 2030.
