

Bucharest produces solar inverters

Overview

Does Romania have a solar PV project in 2023?

Overview of solar PV developments Following a period of lull, Romania has achieved in 2023 a significant milestone in its renewable energy journey - over 1 GW of new solar capacity installed in one year between distributed generation and utility scale projects.

What drives the growth in the Romanian PV sector?

While this annual figure represents a significant quantitative leap relative to the capacity deployed in past years, which averaged 1 MW, the main driver of the impressive developments in the Romanian PV sector is the distributed generation segment.

Is Romania a good country for solar energy?

National targets for solar PV With an average of 1,900 to 2,400 annual sunlight hours, Romania has significant natural potential for solar PV development. Yet, the country has not set ambitious targets for renewable energy sources, aiming for only 30.7% of its final energy consumption to come from RES by 2030.

How much solar energy does Romania need?

In the context of the European ambitions, Romania would need to aim for 44.4% RES, meaning 11.1 GW of solar - 6.1 GW for utility-scale and 5 GW for rooftop PV1. Drivers for solar growth The last two years have been marked by significant legislative changes that underpinned the development of the Romanian PV sector.

Bucharest produces solar inverters

[Ingeteam joins CISOLAR & GREEN BATTERY 2024 Bucharest ...](#)

Ingeteam is currently supplying inverters for a major 46.476 MWp solar project in Romania. This project will be a crucial step towards Romania's clean energy goals, ...
