

China-Africa non-standard power supply and energy storage

Overview

Does China invest in Africa's energy sector?

Over the last decade, compared to other forms of foreign direct investment, China has engaged in relatively large projects in the energy sectors of many African countries, significantly influencing access to clean and sustainable energy on the continent [9, 20, 21].

Is China a solution to Africa's energy crisis?

Over the years, China has positioned itself as a solution to Africa's energy crisis and a global leader in sustainable energy . However, there is little empirical evidence on how Chinese investment drives changes in Africa's energy sectors.

Is China promoting solar energy in Africa?

This is unsurprising, given that China has been a major player in promoting solar energy in Africa, with initiatives like the Solar Power Plan for Africa. These efforts aim to provide off-grid and decentralised solar solutions to remote and underserved areas (Voice of America, 2023).

Does China invest in North Africa?

There is also an Aysha wind power project in Ethiopia. China's investment in North Africa is in the energy sector, but it is predominately in the oil and gas sector, which is not considered clean energy. Although the Southern Africa region has some clean energy investment from China, the large ones are still under construction.
