

# Danish energy storage solar project

## Overview

---

Where is better energy deploying its first battery storage project?

Developer Better Energy is deploying its first major battery storage project, a 10MW/12MWh system, at one of its solar PV plants in Denmark.

What is a battery storage project?

Our goal is to build an integrated business where technology, power trading, and development work together to create long-term value. Initiating a battery storage project involves ensuring proximity to the grid's transmission level, with a screening process initiated with grid operators to assess available capacity.

How do energy projects work?

The projects are operated through a central control system that optimizes storage and power flows helping stabilize and balance the grid. This final stage is where the full value of the project is realised through active management, trading strategies, and ongoing optimization.
