

# Difference between battery system assembly and pack

## Overview

---

What is the difference between battery module and battery pack?

**Battery Module:** A group of interconnected battery cells that increases voltage and capacity compared to individual cells. It includes wiring and connectors and may feature a basic battery management system (BMS) for monitoring.  
**Battery Pack:** A complete energy storage system containing one or more modules.

What is the difference between battery pack and battery cell?

Battery Cell, Module or Pack. What's the difference?

[Infographics] The manufacturing of battery cells compared to battery packs or modules are two very different industrial processes. Battery cell production is primarily a chemical process, while module and pack production is a mechanical assembly process.

What is the difference between battery cell production and module & pack production?

Battery cell production is primarily a chemical process, while module and pack production is a mechanical assembly process. Batteries are sometimes called Cells, Modules or Packs. But what does that mean?

What is the difference?

Battery cells are containers that chemically store energy.

How a battery pack works?

In the battery pack, to safely and effectively manage hundreds of single battery cells, the cells are not randomly placed in the power battery shell but orderly according to modules and packages. The smallest unit is the battery cell. A group of cells can form a module. Several modules can be combined into a package.
