

EU solar Power Plant System

Overview

What is the future of solar energy in the EU?

The European Union (EU) is witnessing a significant expansion in solar photovoltaic (PV) energy as part of its renewable energy transition. By the end of 2024, the total installed PV capacity in the EU is expected to exceed 260 GW, driven by favorable policies, corporate investments, and increasing energy independence strategies.

What is the solar energy landscape in Europe?

The solar energy landscape in Europe has rapidly evolved, positioning the continent as a significant player in global renewable energy production. As of 2023, the European Union (EU) boasts a total installed solar capacity of approximately 263 gigawatts (GW), making it the second-highest region in the world for solar power capacity.

How much solar power will the EU have by 2024?

By the end of 2024, the total installed PV capacity in the EU is expected to exceed 260 GW, driven by favorable policies, corporate investments, and increasing energy independence strategies. This report ranks the 27 EU member states based on their total installed solar capacity at the end of 2024 and outlines their expected growth trajectories.

What is Solarpower Europe?

SolarPower Europe is the award-winning link between policymakers and the solar PV value chain. Get to know the SolarPower Europe team working to transform the European energy system. Get to know everything about solar power. Interested in joining SolarPower Europe?
