

# East Asia wind power storage ratio

## Overview

---

Does East Asia have pumped hydro energy?

East Asia has abundant wind, solar, and off-river pumped hydro energy resources. The identified pumped hydro energy storage potential is 100 times more than required to support 100% renewable energy in East Asia.

What is the energy demand in East Asia & Pacific?

With rapid urbanisation and industrialisation, the East Asia and Pacific region has been on a trajectory of rapidly rising energy demand. China continues to dominate hydropower development in the East Asia and Pacific region, adding 14.4GW of new installed capacity in 2024 to reach a total of 435.95GW.

How can the ASEAN region secure energy supply?

The ASEAN region should consider adopting regional energy networks, such as the Trans-ASEAN Gas Pipeline, with virtual pipelines of liquefied natural gas, and the ASEAN Power Grid to maintain energy supply security. Nuclear power generation is another option for securing energy supply.

What is the Energy Outlook for East Asia 2023?

Energy Outlook and Energy Saving 132 Potential East Asia 2023 Third, power generation is projected to grow slower in 2030–2050 than in 2000–2019. The share of coal power is projected to be 46.1% in BAU and 1.2% in LCET in 2050. The generation source is transitioning to cleaner fuels, such as hydrogen, nuclear, and solar PV and wind.
