

Ecuador solar Energy Storage Plant Construction Project

Overview

When will Ecuador start constructing a solar power plant?

In 2023, the Energy Ministry released tenders for a 500 MW renewable block (wind, biomass, solar), 400 MW Natural Gas Combined Cycle Power Plant (CCCP), and a Northeast Transmission System to supply the Ecuadorian oil system. From these tenders, only the Villonaco project has started construction as of August 2025.

Will Ecuador's energy shortage cause a recurrence of power outages?

Ecuador's energy shortage could result in a recurrence of power outages, particularly in the dry season of September through December. Ecuador has added minimal generation in recent years. In 2020, the Energy Ministry awarded two projects to the private sector: a 110MW wind farm (Villonaco), and a 200MW solar plant (El Aromo).

What type of energy does Ecuador use?

Ecuador's renewable energy is comprised of hydro power (5,419 MW), biomass (1550 MW), wind (71 MW), photovoltaic (29 MW), and biogas (11 MW). Hydroelectric power plants are in three regions: coastal (2 provinces), Andes (9 provinces), and Amazon (4 provinces).

Will Ecuador build a new hydropower plant in 2025?

In 2025, the Government of Ecuador announced plans to build additional hydropower plant capacity in the West where rainfall is plentiful to offset droughts in the East. The 254-MW Toachi Pilaton thermal plant (254 MW) came online in 2025, six years behind schedule.
