

Energy-saving and environmentally friendly uninterruptible power supply

Overview

What is an uninterruptible power supply (UPS battery backup)?

An Uninterruptible Power Supply (aka a UPS Battery Backup) protects vital connected equipment -- computers, servers, and telecommunications equipment -- from power outages. During an outage, that small UPS Battery Backup under your desk at work gives you enough time to save your spreadsheet and properly shut down your computer.

Are UPS battery backups energy efficient?

They are third-party certified to be energy efficient and reduce energy waste by up to 52 percent compared to conventional UPS Battery Backups by minimizing losses in inverters and transformers, offering modular units to avoid oversizing, and/or providing an “eco-mode” of operation.

What is digital control of power supplies?

Digital control of power supplies can mean two different things: the digital control of communication functions, or the replacement of analog control with digital control in PWM (pulse width modulation) circuits. Circuits that incorporate both are referred to as having full digital control.
