

# Energy storage cabinet investment battery

## Overview

---

How big will a battery energy storage system be in 2024?

After record growth in 2024, U.S. battery energy storage systems (BESS) could grow from more than 26 gigawatts (GW) of capacity—enough to power 20 million homes—to anywhere from 120 GW to 150 GW by the end of 2030, depending on the range of projections.

Will a battery storage system help power data centers?

Those storage systems, which will use cheaper lithium iron phosphate batteries, will be used to power data centers and help buffer demand on the electric grid. Ford says the battery storage systems will start shipping in 2027 and that the company plans to build 20GWh of annual capacity.

Is battery energy storage a savior?

Today, technology advances and dramatic cost decreases combine to set up battery energy storage as the savior for both renewables and the overarching electric grid as power demand soars and Congress rapidly phases out tax credits for wind and solar energy.

Are battery storage projects a symbiotic relationship?

Close to half of all battery storage projects are paired with solar or wind energy projects as part of their symbiotic relationship. “Without batteries it would be mayhem,” said Izzet Bensusan, founder and CEO of the Captona energy transition investment firm. “The utilities are realizing that without batteries they cannot manage the grid.”
