

# Energy storage power station big data operation and maintenance

## Overview

---

How to solve problems in big data analysis of battery energy storage stations?

In order to solve the problems in big data analysis of maintenance of large-scale battery energy storage stations, an intelligent operation and maintenance platform has been designed and developed based on the management architecture of battery energy storage stations and safety zones in China.

Is 525mwh distributed battery energy storage station effective?

The data of 525MWh distributed battery energy storage station is transmitted, analyzed, and displayed on the platform. The results proved the effectiveness of the designed platform.

Why does a power grid charge ESS?

It keeps a high average SoC, but it tends to charge the ESS when an excess of generated energy occurs and discharges it also when the main utility grid is available in order to reduce the amount of electricity purchased from the grid. Table 7. Average performance of the considered policies over 25 test episodes in experiment 1). Fig. 7.

Can energy management strategies cope with MGS equipped with ESS?

Contrary to other proposed approaches, the present work aims at defining an energy management strategy that is able to cope with the main issues of MGs equipped with ESS, i.e., ESS degradation and unexpected outages of the main grid, which can be appreciated only considering long time horizons.
