

# Energy storage station operation and maintenance plan

## Overview

---

How to solve problems in big data analysis of battery energy storage stations?

In order to solve the problems in big data analysis of maintenance of large-scale battery energy storage stations, an intelligent operation and maintenance platform has been designed and developed based on the management architecture of battery energy storage stations and safety zones in China.

How do you decide if an energy storage system should be replaced?

Determine criteria to decide whether to repair or replace a component; criteria to decide whether to “cannibalize” a string of modules to source replacement modules or to order new parts; and criteria to decide if an energy storage system with declining energy storage capacity should be replaced.

Do energy storage products need periodic maintenance?

The requirements for periodic maintenance for energy storage products should be identified by the OEM (IEEE 2010). In settings where predictive analytics maintenance is economical, guidance should also be available from the manufacturer that identifies methodologies for assessing when a product may be approaching a failure mode.

Is 525mwh distributed battery energy storage station effective?

The data of 525MWh distributed battery energy storage station is transmitted, analyzed, and displayed on the platform. The results proved the effectiveness of the designed platform.
