

European wind and solar energy storage power station

Overview

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

What is the European energy storage inventory?

A new interactive platform delivers real-time clean energy storage insights as Europe shifts toward sustainable energy sources. Energy storage helps to balance supply and demand. The European Energy Storage Inventory is the first of its kind at European level to show all forms of clean energy storage solutions.

What is Solarpower Europe?

PV trade body SolarPower Europe is celebrating its 40th anniversary with the tagline SolarPower Europe: solar, storage, and flexibility, and has announced plans for a Battery Storage Europe platform to highlight case studies and regulatory best practice.

How many megawatts does a battery storage system use in Germany?

PV plus battery storage led the way with 724 megawatts (MW), followed by onshore wind plus storage at 475 MW. According to SolarPower Europe, 11 percent of the 0.8 GW of large-scale battery storage systems totalling 1.1 gigawatt-hours (GWh) installed in Germany between 2021 and 2023 were combined with renewable energy plants, mainly solar parks.
