

# Guinea Wind and Solar Energy Storage Project

## Overview

---

How many people will 84 MW solar power supply in Guinea?

Translated into household equivalents, the 84 MW project could supply more than 360,000 families. The solar plants will contribute substantially to Guinea's overall goal of producing 30% of its energy from renewable sources by 2030, a key part of the country's commitment to the Paris Agreement.

How will a new energy plant benefit Guinea?

The two plants will make Guinea's energy system stronger, greener and more reliable, bringing an extremely affordable new energy source into a historically fossil-fuel-dominated (and expensively subsidised) market.

Can Guinea become a solar era?

The facilities will also create skilled jobs for engineers, managers and maintenance technicians in Kankan and Siguiri, while powering economic development throughout the communities. Backed up by a sound financial model, this ambitious project is well placed to reach financial close and take Guinea into its solar era.

How can solar energy help a city?

Affordable, clean solar energy will reduce the carbon footprint of energy-intensive local industries like mining, help small and medium-sized businesses grow, and open new opportunities for many other city residents. Translated into household equivalents, the 84 MW project could supply more than 360,000 families.

## Guinea Wind and Solar Energy Storage Project
