

How many power base stations are there in China

Overview

Why are China's power stations important?

China's power stations are a cornerstone of the nation's rapid industrialization and economic growth. As the world's largest energy consumer, understanding the intricacies of China's power generation landscape is crucial.

How many power plants are there in China?

China has 4,227 utility-scale power plants in operation, with a total capacity of 1411679.8 MW. Data and information about power plants in China plotted on an interactive map.

What is the China Energy Map?

The China Energy Map offers a comprehensive, interactive visualization of key energy infrastructure across China. Since its initial launch as the Baker Institute China Oil Map in February 2019, the map has undergone significant development and continues to expand.

How many layers are there in China's Energy System?

Since July 2020, it now features 13 additional layers, including natural gas infrastructure, coal, nuclear, wind, solar power plants, hydrogen infrastructure, carbon capture projects, mining operations, and electric vehicle (EV) battery factories, providing a more complete picture of China's energy system.
