

Hungary Mobile Energy Storage Container Two-Way Charging

Overview

How will Hungary's subsidy scheme affect battery energy storage?

The Hungary panel discussion at the event. Image: Solar Media. Hungary's subsidy scheme for energy storage will drive huge growth in battery energy storage system (BESS) deployments over the next few years.

How much power does Hungary have?

Hungary has 40MWh of grid-scale BESS online today but that will jump 3,400% to around 1,300MWh over the next few years thanks to opex and capex support from the government, said Pálma Szolnoki, senior research associate at trade body the Hungarian Battery Alliance.

Is Hungary a good market for energy storage subsidies?

Moderator Nikita Chandrashekar, director at advisory Augusta & Co, said the scheme made Hungary an attractive market: "It is probably one of the most advanced subsidies schemes to bring energy storage forward. So from a revenue perspective, perhaps, unlike some other markets, the business case in Hungary seems pretty well developed."

Does Hungary have a regulatory framework for co-located Bess projects?

Historically, Hungary's regulatory framework did not provide clear guidelines for the integration of co-located BESS projects. This lack of specific regulation created uncertainty for investors and developers, hampering the widespread adoption of these energy storage solutions.
