

# **Iceland Outdoor Solar Power System**

## Overview

---

Where can solar power be installed in Iceland?

The first publicly connected solar power installation in Iceland is on the remote island of Grímsey, which has a 12 kW photovoltaic system installed in 2022. As of 2025, there are plans to install a solar power system paired with a battery storage system on another off-grid island, Flatey.

Does Iceland have solar power?

Iceland has relatively low insolation, due to the high latitude, thus limited solar power potential. The total yearly insolation is about 20% less than Paris, and half as much as Madrid, with very little in the winter.

Why did HBS Energy & Environment students visit Iceland?

This past February, 50 HBS Energy & Environment students traveled to Iceland to witness firsthand how the country is harnessing the power of nature to deliver clean energy, hot water, and several other decarbonization solutions that affect not only Iceland, but all of us. Renewable energy for everyone, big or small.

What makes Iceland a global example of sustainability?

People who care — that's my personal take on Iceland's greatest natural resource. It's what has made the country a global example of sustainability. And care is exactly what we saw in the faces and attitudes of the people we met during this season of our Icelandic adventure.
