

Khartoum Communication BESS Power Station Charge Standard

Overview

This paper examines the development and implementation of a communication structure for battery energy storage systems based on the standard IEC 61850 to ensure efficient and reliable operation. It explore.

Is a battery energy storage system a state-of-the-art protocol?

Communication with a battery energy storage system or BESS that is compliant with this protocol is not yet state-of-the-art but will be necessary in the future , , .

What is the most innovative communication standard for power system communication?

First, applicable communication standards are investigated and especially the usage of IEC 61850 as the most innovative standard for power system communication is analyzed according to the needs for BESS (Section II).

How many energy storage containers are in a Bess?

As shown in Fig. 3, the BESS consists of 50 containers, each of which is a sub unit of 1 MW/2 MWh. Each 1 MW/2 MWh energy storage container includes two sets of 500 kW PCS, 2 MWh battery and corresponding battery management system.

Does Bess participate in power grid frequency regulation?

Therefore, this paper proposes a control method based on battery SOX, which is used for BESS to participate in power grid frequency regulation. The control method includes limiting the power and charging and discharging state according to battery SOS to achieve the purpose of system safety control.
