

Liquid Cooling Energy Storage Service in London

Overview

What is liquid cooling?

Global Switch is spotlighting liquid cooling as a practical response to the energy demands of AI and high-performance computing (HPC), opening Europe's first live showcase of the technology at its London Docklands campus. The facility removes heat by using liquid rather than air, lowering carbon emissions and boosting efficiency in the process.

Which liquid cooling solutions are available at Global Switch's London Docklands site?

Global Switch's London Docklands site now hosts a fully operational suite showcasing four types of liquid cooling, developed in partnership with six infrastructure suppliers such as LiquidStack and SuperMicro. Is liquid cooling the answer to heat management?

As rack power densities increase due to growing AI and HPC workloads, more effective heat management is required. Global Switch is positioning liquid cooling as an answer to this challenge, describing it as offering "superior cooling capabilities compared to traditional air cooling, as well as lower carbon emissions".
