

London Energy Storage Cabinet Batteries

Overview

Can a battery storage project transform the UK's energy landscape?

Projects like these can transform the energy landscape by producing 24/7 renewable power supply at utility scale. Yet in the UK, it is a different story. Deployment has been sluggish. Since 2021, when Masdar decided to invest £1bn in 3GWh of battery storage projects nationwide, progress has been stifled by systemic constraints.

What is a battery energy storage system (BESS)?

The giant batteries, which are called Battery Energy Storage Systems (BESS), are an emerging part of the global energy market. The largest of these batteries can store enough energy to power thousands of homes for several hours.

Should battery storage be developed at scale across Europe?

Lead author Research Fellow Claudia Brown (UCL Bartlett School of Environment, Energy & Resources) added: “Developing battery storage at scale across Europe is essential if we are to decarbonise the electricity system at pace.

Could a battery energy storage system solve the intermittency challenge?

The solution isn't slowing renewable deployment — it's accelerating the rollout of battery energy storage systems (BESS). These systems can absorb excess generation during windy or sunny periods, storing it for release when demand rises. This could have a game-changing effect in terms of solving the intermittency challenge.
