

Madrid New Energy Storage Box

Overview

Will Madrid become a central base for energy storage systems?

“Our strategy is very clear: to turn Madrid into our central base for energy storage systems. From there, we’ll provide agile and specialized support to clients across Europe and Latin America,” Gattoni explained.

Does Spain need energy storage?

Additionally, Spain is strengthening policies to support the growth of energy storage. The country aims to deploy 22 GW of energy storage by 2030 and 50 GW by 2050. Currently, the total installed capacity of energy storage in Spain—covering planned, under-construction, and completed projects—stands at about 20 GW.

How can Spain transform its energy system into a climate-resilient country?

To ease financing, beneficiaries may request advance payments of up to 100% of the awarded aid, provided certain conditions are met. These efforts are part of a broader strategy to transform Spain’s energy system into one that is more flexible, robust, and climate-resilient.
