

# Marseille produces energy storage containers

## Overview

---

What is the H2V Marseille Fos project?

The H2V Marseille Fos project marks a significant milestone in the transition to green energy, with a substantial green hydrogen production unit set to be developed at the Port of Marseille Fos.

Why is Marseille Fos important?

As a key gateway to the south of Europe, it provides a vital alternative to the ports of Northern Europe. Spanning an area comparable in size to the city of Paris, the Port of Marseille Fos boasts extensive space and infrastructure, making it well-suited for maritime, logistics, and industrial activities.

What industries are in Marseille Fos?

Additionally, it hosts various industries, including refineries, the steel industry, and chemical processing. The Port of Marseille Fos is equipped with extensive ship-repair facilities, including nine dry docks, with “Dry Dock 10” being the largest in the Mediterranean.

How many harbours does Marseille have?

The port is divided into two harbours: the Eastern Harbour, located within the city of Marseille and covering 400 hectares, and the Western Harbour, situated in Fos, approximately 70 kilometers from Marseille. This division enhances the port’s capacity and efficiency in managing its extensive operations.
