

Micronesia solar Pump Inverter

Overview

What is a solar pump inverter?

The solar pump inverter (Solar Pump VFD) converts the DC power of the solar array into AC power, which can drive various pumps and provide clean water for remote areas where power facilities are scarce.

What are the benefits of solar water pump inverter?

As the solar water pump system is eco-friendly and economical, energy-saving protection. It can obviously improve the living standard of people in areas lacking water and electricity. MICNO KE300A-01 series solar pump inverter with MPPT function has been widely used in different countries, especially in the Middle East and Africa area.

What is the control method of photovoltaic pumping inverter motor?

The control method of the photovoltaic pumping inverter motor is frequency conversion control. As the light intensity increases, the output frequency also gradually increases, and the corresponding pump motor speed will be faster and more powerful. No battery interface design, no battery investment are required.

How does a solar pump controller work?

Solar pump controller consists of a series of solar panels that are connected in parallel allocation to generate the power and voltage required. When the sunlight varies during the day, the power input to the drive also varies and the solar pump controller generates a variable ratio to control the speed of the motor.

Micronesia solar Pump Inverter

Solar pump system

The solar array absorbs solar radiation and converts it into electric energy to provide power supply for the whole system. The solar pump inverter converts the DC output by ...
