

# No-degradation solar container battery

## Overview

---

Is CATL TENER a zero-degradation energy storage system?

CATL has unveiled TENER, a 6.25-MWh energy storage system that is showing zero degradation in the first five years of use. While preventing the.

Why is zero degradation important for energy storage power plants?

While preventing the degradation of capacity over the first five years of use is a significant advancement in increasing the lifespan of batteries, CATL says the zero degradation of power is also important for energy storage power plants that intend to meet the requirements of new electric power systems.

Does a battery have zero degradation?

Dave West, CEO of Australia-based battery procurement platform BatNav, said: "It's clever marketing, but no cell has zero degradation. You either oversize or augment your battery. Either way, the customer pays."

Does energy storage have a five-year zero degradation claim?

The five-year zero degradation claim has been met with both scepticism and awe from the energy storage industry, with many taking to business networking site LinkedIn to comment on the claim.
