

North Asia Solar Panel Purchase and Sales Inventory System

Overview

Why is inventory management so difficult for solar companies?

Inventory management for solar companies can be more complicated than in other industries because of the many influences affecting customers' purchasing decisions. Demand for solar panels changes dramatically based on external factors. Some are similar to many other sectors.

How can a solar installer track a serial number?

Installers can accurately track serial numbers for solar panels or other equipment used in installation with our integrated barcode scanning capabilities. Our cloud-based inventory solution provides complete control over your warehouse to save you time conducting physical inventory and save you money on purchasing decisions.

How do solar companies manage inventory?

As a solar company, you may have warehouses across the country, each holding a different amount of inventory. Many companies have to manage the complexity of maintaining stock at multiple locations. In the solar industry, the need to keep equipment on individual crew trucks further complicates inventory management.

Should you sell solar panels at a loss?

Solar products often experience periods of rapid devaluation. If you have unsold inventory in stock, these market conditions can mean you have to sell panels at a loss. This is less of a problem if you only buy equipment for your contracted jobs because you'll sell them at an agreed-upon price.
