

Price of solar panel per square meter

Overview

How much does a solar panel cost per m²?

Global cost per m² in 2025 varied immensely across regions because of labor, logistics, and policy support. In the United States, a typical solar panel cost per square meter in residential installations is between \$280-\$320 per m² because labor and permission expenses are higher.

How much does solar cost in California?

Divide annual kWh by ~1,200 (typical kWh/year per kW of solar in much of California). In California, expect \$2.75 - \$3.50 per watt before incentives (solar panel cost in California). This gives your solar cost per square foot. Estimate your system size, price before and after incentives, and cost per square foot.

How much does a solar panel cost per watt?

Let's use a polycrystalline panel as an example. An average polycrystalline panel offers 160 watts per m² for \$140. Thus, the cost per watt for that panel is \$0.87. A high-efficiency PERC panel may offer 200 watts for an area of \$180, thus accounting for about \$0.90 per watt.

How much does home solar cost?

The average pre-incentive cost of home solar is \$29,161 for a three-bedroom house, or \$20,412 after claiming the 30% tax credit. However, as shown in the chart below, the number of bedrooms isn't a great indicator of the size and cost of a solar system - and neither is living space, for that matter.
