

Rabat Energy Storage Station Reverse Power Transmission

Overview

Can Morocco transition to a re-based electricity system by 2050?

Morocco could transition to a RE-based electricity system with a 92 % integration rate by 2050 for an additional \$32 billion total cost. Achieving this requires adopting the ambitious NANES scenario, which includes EE measures to reduce energy demand by 15 % between 2030 and 2050 compared to baseline forecasts.

How has Morocco's electricity system changed in recent decades?

Moroccan electricity system Morocco's electricity sector has undergone significant transformation in recent decades, thanks to a combination of policy reforms, infrastructure investment, and a focus on RE sources. Figure S1, which can be found in the supplementary document, provides a comprehensive overview of this power system.

How does the Moroccan power grid work?

The Moroccan power grid operates as a unified system across the kingdom, with electricity generation managed by a single operator. The grid is facing challenges from extreme weather and construction damage, leading ONEE to place emphasis on upgrading its infrastructure.
