

Singapore energy storage batteries are maintenance-free

Overview

Does Singapore need a solar energy storage system?

SINGAPORE - As Singapore seeks to harness as much sunshine as it can to maximise its limited renewable energy sources, it needs to improve technologies that can store excess solar energy from the day. One such technology is energy storage systems (ESS), which are essentially giant batteries packed in containers that store electricity for later use.

Will Singapore have 'giant batteries' to store 200MW of energy?

Singapore will achieve its target of having “giant batteries” to store at least 200MW of energy three years early. The 200MW system is currently being installed across two sites on Jurong Island – Banyan and Sakra. Read more about it [here](#).

What is a battery energy storage system?

Battery energy storage systems (ESS) provide critical frequency and stability support to power grids. As one of Asia’s largest battery operators, our energy storage portfolio is well-positioned to support the evolving needs of power markets as they increase their uptake of renewable energy. The Sembcorp Energy Storage System was launched in 2023.

Can a sodium-ion battery be used for energy storage in Singapore?

Posh Electric specialises in developing ESS that run on sodium-ion batteries. With the grant, the company will study the viability of this newer type of battery for energy storage in Singapore. Sodium is 1,000 times more abundant on earth compared with lithium, which has to be mined in specific areas, such as briny water and rock ores.

Singapore energy storage batteries are maintenance-free
