

# Solar Power Generation System in Nepal

## Overview

---

How much solar energy can Nepal produce?

Using just 0.5% of Nepal's total land area, it is possible to produce 429,000 MW of electricity. With technological advancements, power generated from solar panels can be directly connected to the grid without battery installations. Moreover, a World Bank study has shown that Nepal has the potential to generate 30,000 MW of solar energy.

How to promote solar energy in Nepal?

The first and most reasonable approach for promoting solar in Nepal is to increase the domestic energy generation. In Nepal, we do not have significant sources of petroleum which is dominating the proportion of modern energy usage in the country.

How many solar projects are there in Nepal?

The Nepal Electricity Authority had previously entered into PPAs for 110.36 MW with 17 solar projects, out of which 85.26 megawatts are from the private sector, and 26 megawatts are from the authority, all connected to the national transmission line for solar energy.

How many power plants are there in Nepal?

Six of the country's seven provinces generate hydropower as their main energy source, while Madhes Province generates solar energy. While NEA (Nepal Electricity Authority) and its subsidiaries own and operate 20 generation stations, the remaining are owned and operated by Independent Power Producers (IPP).

## Solar Power Generation System in Nepal
