

Solar Sloped Tile Roof

Overview

What is a Solar Tiled Roof?

A Solar Tiled Roof is a system that combines solar and roofing functionality into a perfect energy production system without compromising the visual appearance of your home. The building-integrated modules for tiled roofs interlock with nearly all concrete and clay tiles, leaving your home as beautiful as it ever was. Solar Tiled Roof is for homeowners looking to harness solar energy in an aesthetically pleasing way.

Can Solarstone® be installed on a sloped roof?

Solarstone® solar modules can be installed on all types of sloped roofs with a minimum angle of 18 degrees. This is necessary to ensure water-tightness of the installation. Solarstone® says goodbye to costly mounting systems.

Are solar roof tiles a good idea?

Just like conventional solar PV panels, solar roof tiles can generate electricity to heat the water, run the appliances and cool the house. But they have other advantages: There's no need to drill holes in the roof to install them. They're not bolted onto the roof, so there's no extra strain from natural wind flow.

Why should you choose Solarstone® solar tiled roofs?

Solarstone® solar tiled roofs are a cost-effective and modern choice. Solarstone® offers prices that are competitive with conventional on-roof solar installations. Installing a Solarstone® Solar Tiled Roof is easy and efficient, with a simple gabled 60 m² roof being completed in just 1 day.
