

Solar System News

Overview

Which interstellar object cut through our Solar System?

It's the third known interstellar object to cut through our solar system. Interstellar comets like 3I/Atlas originate in star systems elsewhere in the Milky Way, while home-grown comets like Halley's hail from the icy fringes of our solar system. A telescope in Hawaii discovered the first confirmed interstellar visitor in 2017.

How many planets are in the Solar System?

Solar System Planets. Astronomy articles on the eight planets, plus the two dwarf planets, Pluto and Eris. Great pictures of everything in the solar system. Updated daily.

Why is the Solar System so important?

"This system is one of the best that we know to actually probe some of the processes that happened in our solar system," said Merel van 't Hoff, an astronomer at Purdue University and co-author of the study, said in a statement released by Nature. Astronomers have witnessed the early formation of a solar system for the first time.

Do we live in a planetary system?

We live in an amazing planetary system. From the yawning Valles Marineris on Mars and the subsurface ocean hiding beneath the ice crust of Jupiter's moon Europa, to the eerily Earth-like terrain of Saturn's moon Titan, the solar system brims with wonders. And let's not forget the Sun, with its mysteriously hot corona and solar flares.
