

# Solar air conditioning design for large shopping malls

## Overview

---

Why do shopping malls need air conditioning?

Studies show that the longer shoppers remain in a store, the more money they are likely to spend. For this reason, the air conditioning system of a shopping mall must be able to provide the right comfort in every season and at the same time must allow a right energy consumption in order to contain operating cost.

What is the air conditioning refrigeration system of large shopping malls?

The air conditioning refrigeration system of large shopping malls is the air conditioning refrigeration unit that transfers indoor heat to the outdoor through the process of refrigerant compression and evaporation ( Zheng and Lai, 2018 ).

Do large shopping malls consume a lot of energy?

( Tsinghua University Building Energy Efficiency Research Center, 2018)  
Among them, large shopping malls are a type of high-energy-consuming public buildings ( Curto, 2019 ), and their number and scale of large shopping malls are growing rapidly with the development of the social economy, and at the same time, it consumes a lot of energy.

What is the power system of large shopping malls?

The power system of large shopping malls is mainly divided into a lighting power system and air-conditioning power system. The lighting power in shopping malls is an autonomous behavior of merchants. The establishment of an energy consumption diagnosis system will lead to low accuracy of the model due to the autonomous behavior of users.

## Solar air conditioning design for large shopping malls

---

### Innovative Strategies and Practices for Enhancing Energy ...

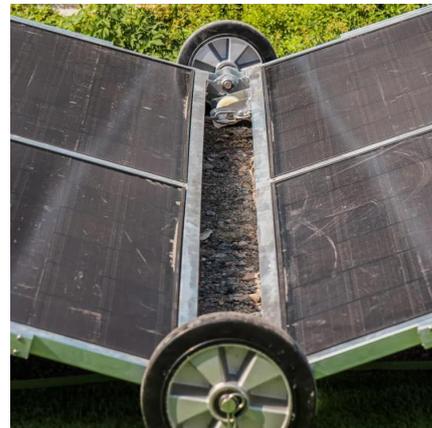

Shopping malls represent complex built environments characterized by diverse spatial layouts, extensive mechanical systems, and high occupant densities. Consequently, ...
