

# Solar inverter converted to generator

## Overview

---

How do you Power a solar inverter?

You just plug the inverter into the transfer switch and flip the switches from grid (line) to solar (gen). I have a 6 circuit switch wired into my main panel and can power them with my gas generator or from my solar inverter. I can pick which circuits to power depending on the load and how much power I have stored in my batteries.

How do I connect a solar inverter to a generator?

To connect a solar inverter, it should be connected to the utility side of the transfer switch. Connecting the solar to the generator can lead to bad outcomes. It's recommended to consult your Power Company (POCO) for their approved equipment list before proceeding. Need assistance?

Is an inverter necessary for a solar generator?

An inverter is good for a solar generator as it can help the generator last longer during power outages. The inverter gets its power from the generator instead of the solar battery, allowing you to use the solar battery to power your load at night when there is no sun.

How does a solar generator inverter work?

These will include the physical space in the enclosure, the battery size, and the solar charging inputs' types and capacities. A solar generator inverter will take the battery's DC (direct current) output and turn it into AC (alternating current), similar to the power from a home wall socket.

## Solar inverter converted to generator

### [Is It Possible to Connect an Inverter to a Generator?](#)

A solar-powered cabin uses batteries and an inverter for everyday needs. During winter, the solar can't keep up, so a small gas generator charges the batteries through an AC ...
