

# Solar panel charging and discharging system

## Overview

---

How does solar battery charging work?

Charging your battery involves several stages and includes different parts of the PV system. This is called the charging system. As you'll learn below, the solar battery charging process is also a controlled chain of events to prevent damage.

What is a solar battery charging system?

This is called the charging system. As you'll learn below, the solar battery charging process is also a controlled chain of events to prevent damage. The solar battery charging system is only complete if these components are in working order: the array or panels, the charge controller, and the batteries.

How does a solar panel charge a battery?

The solar panel absorbs solar energy and channels it to the Solar Charge Controller to charge the battery. The Solar Guardian App is used to monitor the system. If the battery is not full, the charging process continues. If it is full, power from the battery is channel through an inverter to supply a 350watt load.

When is a solar battery charging system complete?

The solar battery charging system is only complete if these components are in working order: the array or panels, the charge controller, and the batteries. Here is what happens right from when sunlight hits the panel to when the battery receives and stores energy:
