

Solar panels like glass

Overview

What is solar glass?

Solar glass is similar to transparent solar panels as they it looks a lot like glass panes. The glass has a thin film of solar PV technology over it which can generate electricity from the sun.

Can solar glass be used as window panes?

While solar glass is currently not transparent enough to be used as window panes (although manufacturers are developing the technology to make this possible), solar glass panels can be installed in a variety of ways in the home and garden to generate free renewable electricity for your appliances.

What type of glass should I use for my solar panels?

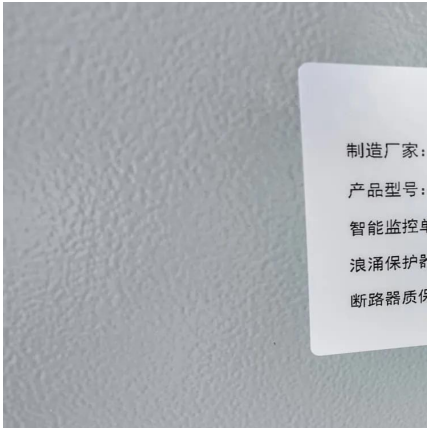

- The specification of the glass is therefore likely to be determined by the structural/safety requirements rather than by the acoustic requirements
- We recommend that the glass is:
 - tempered, to toughen it and to avoid shattering in the event of a collision;
 - laminated - essential to incorporate and protect the solar panel anyway.

What is the use of glass in solar panels?

Glass is used most often as a cover for solar collectors used for space heating of homes or for industrial or public building applications. It is a good transmitter of the incoming solar radiation, but transmits almost no radiant heat from the absorber surface to the surroundings.
