

Solar panels power cuts

Overview

Do solar panels work in a power cut?

You can make sure your solar panels work in a power cut by opting out of the electricity grid – but you'll need to be prepared. If you already live in an off-grid home that isn't connected to the electricity grid, your panels will continue working as normal.

Can solar panels keep your home running during a power cut?

You can always: Power cuts can happen at any time. But with the right combination of solar panels, battery storage, and a backup inverter, you can stay switched on. At Going Green Renewables, we specialise in installing solar panels and battery storage systems that keep homes and businesses running, even through power cuts.

Should you buy a solar panel if you have a power cut?

On the flip side, if power cuts rarely happen to you and you're happy with your solar panel system as it is, it's not always a necessary purchase. After all, the great majority of UK homes don't go through any power cuts over the course of a year.

Will a solar panel charge a battery during a power cut?

Your solar panels will continue to charge your battery during a power cut – but only if they're set up to do so. Make sure your installer uses a battery inverter with a higher capacity than the solar inverter, so the battery doesn't get overloaded. Otherwise, your battery may simply discharge all its stored energy when a power cut hits.
