

Solar panels to transform home lighting

Overview

What is a solar lighting system?

A solar lighting system refers to an eco-friendly lighting solution that harnesses power from sunlight through photovoltaic (PV) panels. It captures and converts sunlight into electricity, which is then stored in batteries for use when needed, such as during the night or on cloudy days.

How do solar lights work?

Solar lights operate by utilizing photovoltaic (PV) cells, which absorb the sun's energy and create an electrical charge within the panel. This charge travels through wires connecting the solar cell to a battery, converting and storing the energy as chemical energy for future use.

How do I choose a solar lighting system?

Brightness Required: Assess the level of brightness needed. For outdoor security, high-intensity solar-powered floodlights or lamp posts are best, whereas for creating ambiance, dimmable or lower intensity lights suffice. A solar lighting system that's tailored to your lighting needs is a healthy choice for both the environment and your wallet.

Do solar-powered lights need batteries?

Yes, solar-powered lights typically need batteries. These batteries for solar lighting store the energy generated by the solar panel during the day. When the sun goes down or if the solar panel cannot produce energy, the battery provides the stored energy to the light, making the light operational even in darkness.
