

Solar water pump on the third floor

Overview

What is a solar powered water pump?

A solar powered water pump is an eco-friendly, off-grid solution that uses solar energy to move water from wells, rivers, ponds, or tanks—without needing electricity or fuel. Perfect for farms, homes, and remote areas, these pumps are powered by photovoltaic panels and come in both surface and submersible options.

How to choose a solar water pumping system?

Designing and selecting a solar water pumping system requires a systematic approach, from assessing site conditions to optimizing the pump and solar array. By following these steps and considering factors like water demand, dynamic head, and solar irradiation, you can create a reliable and efficient system tailored to your needs.

What is the simplest solar water pump system?

So let's start with the easiest version of the solar water pump system and work our way up. The simplest version of this pump house uses a Shurflo 3.5gpm 12V Pump - the exact same pump we've had in our Airstream since 2017. It's by far the most rock solid pump we've used on any of these builds. They just don't quit!

Is a solar water pump right for You?

But today, a silent revolution is flowing across the globe, powered by the sun. The solar water pump, once a niche and expensive technology, has become a powerful, affordable, and incredibly reliable solution for everyone from backyard hobbyists to large-scale agricultural operations.
