

Southern Europe solar Energy Storage solar container lithium battery

Overview

What is the battery storage Europe platform?

The Battery Storage Europe Platform brings together industry leaders representing the battery storage value chain to advance the business case and regulatory frameworks for battery storage across the EU. Together, we urge a tenfold increase in battery storage by 2030 to ensure Europe's energy transition, security, and competitiveness.

How many battery energy storage systems are there in Europe?

The EU currently has just over 50 GWh of battery energy storage systems (BESS). To stay on track for the 2030 renewables targets, this must increase to between 500 and 780 GWh. Our core asks: 10X more battery storage in 5 years." Walburga Hemetsberger, CEO of SolarPower Europe, mentioned, "Solar and storage are the perfect pair.

Why is Solarpower Europe launching a new platform?

As the leading EU voice for solar - the sector driving significant demand for battery storage - SolarPower Europe is well placed to connect its deep network to the new Platform and the era of solar, storage, and flexibility.

Will Solarpower Europe deploy 780gwh of battery storage?

Despite this surge, SolarPower Europe said the continent is not on track to deploy the 780GWh of battery storage it claimed will be needed to ensure flexibility, reliability and decarbonisation of the energy sector in line with policy targets by 2030.
