

# The difference between LED solar container outdoor power and indoor power supply

## Overview

---

What is the difference between outdoor and indoor light?

Outdoor power budgets are typically between 5-500mAh (3.7V) per day but can be much higher using a larger solar panel. The second significant difference between outdoor and indoor light is their spectrums. Every light source, such as LEDs, Fluorescents, or the sun, is made up of a different combination of colors.

What is the difference between a grid-powered LED light and a solar-powered light?

Today, both solar and regular LED bulbs use the same type of LED chips. The difference is in their power source. A grid-powered LED fixture uses AC power, while a solar fixture uses a battery with DC power. Below is a table showing some differences between a typical grid-powered LED light and a solar-powered LED light 5:.

Which solar panels are suited for low-power IoT applications?

Our thin-film flexible Indoor Light and Classic Application solar panels are well suited for low-power IoT applications in indoor and outdoor environments. Indoor panels are rated at 200 / 1000 lux and outdoor modules are rated at 25% / 100% sun intensity. Start your evaluation or prototype with our simple to use development kits.

Is a solar light's bulb different from a standard LED bulb?

Clients wonder if a solar light's bulb is different from a standard LED bulb. They think solar bulbs might be inferior or special. Both solar lights and standard LED lights use LED bulbs. They share the same core technology, but solar lights get power from stored solar energy. I remember when I started with solar lights more than a decade ago.
