

The more solar panels the better

Overview

Why should you install more solar panels?

All things being equal, installing more solar panels generally provides more benefits in terms of energy generation, long-term cost savings and overall efficiency. Solar panels have a longer lifespan than batteries and directly contribute to generating clean, renewable energy for your home.

Should I add more solar panels or batteries to my home energy system?

To understand whether it's better to add more solar panels or batteries to your home energy system, it's a good idea to know exactly how these devices work individually and together. Solar panels convert sunlight into electricity, which can be used to power your home directly.

Are solar panels becoming more efficient?

That efficiency might be coming. There is a worldwide race, from San Francisco to Shenzhen, to make a more efficient solar cell. Today's average commercial solar panel converts 17-19% of the light energy hitting it to electricity. This is up from 12% just 10 years ago.

Why should you choose a solar panel for your home?

Limited roof space - The number of panels that can be added may be restricted by the available roof space. Increased energy storage - More batteries means you can store more energy. This means you can run your home for longer periods of time just from the battery. If paired with solar panels, this is the cheapest electricity you can get.
