

VIVE Base Station Power Bank

Overview

How much power does a Vive base station use?

Fun Fact: While the power adapters that come with the Vive's base stations list their max as 2.5A (2500 mA), the base stations really don't use anywhere near that in practice. Dev reports show that the base stations run just fine at 0.75A (750 mA).

How do I charge my Vive wireless adapter?

Note: An HTC power adapter is not included with VIVE Wireless Adapter. Plug the power adapter into an electrical outlet. The LEDs on the power bank will display the charging status. The LEDs blink in sequence to indicate the current charging status. The power bank is fully charged when the fourth LED stops blinking.

Can the Valve Index work with one base station?

The Valve Index can work with one base station after setup, but it requires two for the initial setup. This is crucial for those trying to save money with one base station. The Valve Index does not need two base stations for use if you prefer seated or standing configurations.

How do I set up a base station on my Vive?

Step 1: Packaged with the Vive box is a long, optional cable. Plug this cable into the base stations. Step 2: Push the mode buttons on the backs of the stations until one station displays "a" and the other "b." Step 3: If done correctly, the base station LEDs should now be solid green.
